

# Precision Engineered Metal Components

These precision-engineered metal components come in a variety of shapes, sizes, and finishes. The parts are suitable for use in mechanical assemblies, electronic devices, or other precision instruments.

## Product Overview

### Precision Engineered Components

These precision-engineered metal components are designed for high-performance applications in mechanical assemblies and electronic devices. Crafted from durable materials including stainless steel and aluminum, each part features exacting tolerances with specialized threads and grooves. Their robust construction ensures reliability and high-quality fitment across a wide range of precision instruments.

## Technical Specifications

### Component Features

- Precision-machined threads
- Advanced surface finishing
- Complex geometric grooving
- High-tolerance dimensions

### Material Composition

Stainless Steel, Aluminum, Alloy

## Application

### Industry Applications

Mechanical Assemblies • Electronic Devices • Precision Instruments
