

Precision Engraving and Etching Machine with Digital Interface

This precision engraving and etching machine is designed for detailed material processing. It features a digital display for parameter monitoring, speed and file controls, and multiple connectivity options.

Overview

Precision Engraving and Etching

This precision engraving and etching machine is engineered for detailed material processing, offering high-accuracy output for professional applications. Equipped with an intuitive digital interface, it allows operators to monitor parameters, control speeds, and manage files seamlessly. Its versatile design supports a wide range of connectivity options, ensuring reliable performance and ease of use in diverse industrial environments.

Technical Specifications

Power Input

12 V DC
Input Voltage

Connectivity & Interface

Digital Control Features

- Digital Parameter Display
- Speed Control
- File Management System
- Run/Power Status Indicators

Connectivity Ports

DC Power Input, Console Port, SD Card Slot
