

Precision Grinding and Polishing Discs

Precision grinding and polishing discs are designed for material processing applications. The discs deliver consistent performance and high material removal rates for efficient surface finishing.

Product Overview

Precision Grinding and Polishing Discs

These precision grinding and polishing discs are engineered for high-performance material processing across a variety of industrial applications. Designed to deliver consistent results and high material removal rates, they ensure efficient surface finishing for demanding projects. They are versatile tools suitable for metalworking, ceramics, and composite material processing.

Technical Specifications

Processing Capabilities

- Grinding
- Polishing
- Deburring

Key Performance Features

High Material Removal • Consistent Performance • Efficient Finishing

Suitable Materials

Metalworking, Ceramics, Composite Materials
