

Precision Laser Cutting Services for Metal Fabrication

Provides precision laser cutting services for metal components. Capabilities include sheet metal processing, forming, and welding to create custom metal parts for various industrial applications.

Service Overview

Precision Metal Fabrication & Laser Cutting

This professional metal fabrication service specializes in high-precision laser cutting, sheet metal processing, and riveting welding. With over a decade of experience, the facility utilizes advanced high-power laser technology to deliver efficient, low-cost, and high-quality metal components. The service is trusted by major international enterprises across Europe, America, and Asia for demanding industrial applications.

Capabilities

Core Processing Capabilities

Laser Cutting, Sheet Metal Fabrication, Riveting, Welding

Machinery & Equipment

Laser Cutting Power

15000 kW

Laser Cutting Capacity

Available Machinery

- High-power laser cutting machines
- 4m Plate shearing machine
- 6m Plate shearing machine
- Bending machine
- CNC machine tools

Facility Details

Facility Area	6000 sqm
Total Employees	39

Quality & Standards

Export Markets

Europe • America • Japan • Korea
