

Precision Machined Brass Component with Threaded Fitting

This precision machined brass component features a cylindrical body with multiple grooves and a hexagonal end. A separate threaded fitting with a hexagonal head is included for plumbing or mechanical applications requiring durable and corrosion-resistant parts.

Product Overview

Precision Machined Brass Component

This precision-machined brass component is engineered for reliability in demanding plumbing and mechanical environments. Featuring a robust cylindrical body with integrated grooves and a hexagonal end, it ensures secure installation and long-term durability. The accompanying threaded fitting, complete with a hexagonal head, facilitates easy assembly and maintenance, making it an ideal choice for professional-grade applications requiring high corrosion resistance.

Technical Details

Material	Brass
Key Features	Precision Machined, Corrosion Resistant, Threaded Fitting, Hexagonal Head

Application

Primary Applications

- Plumbing Systems
- Mechanical Assemblies
- Industrial Fluid Handling
