

Precision Machined Brass Fitting

These precision machined brass fittings are designed for various industrial applications. The components feature threaded connections and hexagonal bodies for secure and easy installation.

Product Overview

Precision Machined Brass Fitting

These precision machined brass fittings are engineered for reliability in demanding industrial environments. Utilizing advanced digital lathe technology and standard gauge checking, each component ensures tight tolerances and consistent performance. Constructed with a forged body for enhanced durability, these fittings are ideal for fluid, gas, hydraulic, and pneumatic systems.

Manufacturing Standards

Customization & Sampling

- Accepts customer drawings
- Accepts customer samples
- Free mould and tooling making
- Free sample mailing

Production Methods

Digital Lathe Machined, Standard Gauge Checked, Forged Body

Technical Features

Key Design Elements

Hexagonal Body • Threaded Connections • Corrosion Resistant • High Precision
