

Precision Machined Metal Accessories

These precision-machined metal accessories are engineered for a variety of industrial applications. The collection includes components with conical, cylindrical, and specialized geometries, featuring various mounting interfaces and precision-machined features.

Product Overview

Precision Engineered Components

These precision-machined metal accessories are meticulously crafted for high-performance industrial applications. The collection features a diverse range of geometries, including conical, cylindrical, and specialized shapes designed to meet rigorous manufacturing standards. Built for durability and accuracy, these components are ideal for tooling systems, machining setups, and complex mechanical assemblies.

Technical Details

Available Geometries

- Cylindrical
- Conical
- Flanged
- Grooved

Materials

Steel, Brass

Surface Finish

Consistent and smooth finish

Applications

Primary Applications

Tooling Systems • Machining Setups • Precision Engineering • Mechanical Assemblies
