

Precision Machined Spring Plunger Set

This set features precision machined metal components including a cylindrical sleeve, flanged screw, and stepped shaft. These components are manufactured to tight tolerances for demanding industrial applications.

Product Overview

Precision Machined Components

This precision machined set includes high-tolerance metal components designed for demanding industrial and mechanical applications. Engineered for durability and reliability, the set features components with complex threading and machined features suitable for integration into sophisticated assembly systems. These parts are produced under strict quality management standards, ensuring consistent performance for professional engineering environments.

Manufacturing Standards

Management Systems

- ERP Integrated Management
- Standardized Process Control
- Laboratory & Testing Center

Certifications

ISO 9001:2008

Technical Capabilities

Core Competencies

Mold Design • Precision Machining • R&D Support • Technical Consultation

Primary Application Areas

- Automobile Parts Molds
- Semiconductor Molds
- IC Connectors
- Lead Frame Electrical Connections
- Motor Fixed Rotors
