

Precision Metering Pump with Digital Display

This precision metering pump is designed for accurate chemical dosing and similar applications. A digital display allows for precise control and monitoring of the flow rate, with multiple ports enabling integration into automated systems.

Product Overview

Precision Metering Pump

This precision metering pump is engineered for demanding industrial environments, offering reliable chemical dosing and fluid transfer capabilities. Featuring an intuitive digital display, it allows for accurate monitoring and control of flow rates to ensure process consistency. Its robust construction and versatile connectivity options make it an ideal integration component for automated fluid management systems.

Technical Specifications

Flow Rate Reading

0.14 L/min

Flow Rate

Connectivity

- Multiple input ports
- Multiple output ports
- Automated system integration ready

Interface

Digital Display
