

Precision Servo Drive for Motion Control

This servo drive is designed for precision motion control applications. It supports various feedback devices and motor types, offering comprehensive diagnostics and protection features.

Product Overview

Precision Motion Control

This high-performance servo drive is engineered for demanding motion control applications, providing exceptional accuracy and responsiveness. Equipped with advanced control algorithms and high bandwidth capabilities, it ensures optimal performance in industrial automation, robotics, and complex packaging machinery. The unit supports a wide array of feedback devices and motor configurations, making it a versatile choice for modern manufacturing environments.

Technical Capabilities

Key Performance Metrics

350 Series

Model Rating

Advanced Features

Advanced Control Algorithms, High Bandwidth, Flexible Communication, Comprehensive Diagnostics, Protection Features

Compatibility

System Compatibility

- Servo Motors
- Servo Encoders
- Servo Transformers
- Servo Cables
- Servo Valves
- Servo Amplifiers
- Servo Actuators
