

Precision Wood Turning Lathe

This precision wood lathe is designed for diverse wood turning applications. It features a robust build with a stable base, an adjustable tool rest, and variable speed control for optimal performance.

Overview

Professional Precision Wood Turning

This precision wood turning lathe is engineered to deliver high performance for a wide range of woodworking applications. Built with a robust frame and a stable, vibration-dampening base, it provides the accuracy required by professional woodworkers while remaining accessible for hobbyists. The integrated variable speed control and powerful motor ensure smooth operation and consistent results across various project types.

Technical Specifications

Target Users

Professional Woodworkers • Hobbyists

Machine Type

Wood Turning Lathe

Key Features

Variable Speed Control, Robust Construction, Stable Base, Precision Components
