

Press Brake CNC Controller

This CNC controller provides a complete solution for conventional press brake applications, supporting two axes. It features a bright LCD display for clear and easy control.

Product Overview

Precision CNC Control

This CNC controller is designed for high-precision metal bending applications on press brakes. It features an intuitive interface with a dedicated numerical keypad and navigation controls for efficient programming. The system supports multi-axis control for both Y and X axes, ensuring reliable repeatability for complex production tasks.

Technical Specifications

Core Features

- Numerical data input interface
- Parameter setting management
- Program storage capabilities
- Real-time coordinate monitoring

Operational Metrics

2 count

Supported Axes

Supported Axes

X-axis, Y-axis
