

Pressure Switch for HVAC&R Systems

This pressure switch monitors and controls pressure in various systems. It is designed for HVAC&R systems, providing pump control and protection.

Product Overview

Pressure Switch for HVAC&R Systems

This pressure switch is engineered to provide precise monitoring and control for HVAC&R systems. It automatically manages pump operation to ensure efficiency, while providing critical protection against dry-running and system blockages. Its versatile design supports reliable flow control and integrates seamlessly with electronic control systems via an included PC board.

Key Features

System Capabilities

- Automatic pump start and stop
- Dry-running protection
- Stuck pump protection
- Integrated flow control

Technical Integration

Integration Components

PC board, Pressure control, Flow control, Threaded connection
