

Pressure Switch for Water Pump

This pressure switch is designed for use in water pumps and air compressors. It regulates pressure within the system to ensure optimal performance and safety.

Product Overview

Professional Pressure Control

This pressure switch is engineered for precision regulation in water pump and air compressor systems. Built with robust metallic components and high-quality electrical contacts, it ensures consistent operational safety and efficiency. The intuitive design facilitates straightforward installation and field adjustment, making it a reliable solution for various pressure control applications.

Technical Specifications

Build Quality

- Robust metallic housing components
- High-precision spring mechanism
- Industrial-grade electrical contacts
- Protective safety enclosure

Application Compatibility

Water Pumps, Air Compressors

Installation

Easy installation with field-adjustable pressure settings.
