

Prestressed Concrete Reinforcement Steel Wire

High-tensile prestressed steel wire designed for concrete reinforcement. The surface finish is optimized for bonding with concrete and supplied in coils ready for cutting and placement.

Product Overview

High-Tensile Reinforcement Solutions

This prestressed concrete reinforcement steel wire is engineered for high-performance structural applications, including precast concrete elements and bridge construction. It features exceptional tensile strength and optimized ductility to meet exacting standards for load-bearing capacity. The wire surface is specially finished to ensure superior bonding with concrete, enhancing the structural integrity of the final build.

Technical Properties

Primary Applications	Precast Concrete, Bridge Construction, Structural Reinforcement
Surface Characteristics	Optimized for concrete bonding

Logistics and Supply

Supply Format	Coils, ready for cutting and placement
