

Primary Flash Tank

This primary flash tank is designed for horizontal installation. It is suitable for use in chemical or petroleum refining processes.

Product Overview

Industrial Efficiency

The Primary Flash Tank is a robust pressure vessel designed for high-performance separation processes in demanding petrochemical environments. Engineered for durability, it utilizes advanced material compositions to handle extreme operating pressures and temperatures. This unit is optimized for reliability in heavy-duty refinery applications, ensuring consistent performance under rigorous industrial conditions.

Technical Specifications

Design Pressure

6.5 Mpa

Pressure Rating

Design Temperature

290 °C

Weight

52.9 T

Construction Details

Dimensions

Parameter	Value
Standard Size	\$3000 \times 6870 \times (98 + 3)

Materials

16MnR, SA-240-304
