

Primary Jaw Crusher for Mining

This jaw crusher is designed for primary crushing applications in mining and aggregate processing. The machine features heavy-duty construction to handle large feed sizes, ensuring consistent output and reliable performance.

Product Overview

High-Efficiency Primary Jaw Crusher

The JC Series Jaw Crusher is a state-of-the-art primary crushing solution designed with international advanced engineering principles. It offers optimized structural integrity and material durability, making it an ideal choice for the primary processing of various hard and abrasive rocks like granite, basalt, and limestone. The machine supports flexible configurations, including an assembled frame design to meet diverse operational requirements.

Certifications and Compliance

Quality Standards

CE • ISO 9001 • SGS • TÜVRheinland • BUREAU VERITAS

Technical Features

Operational Highlights

- Reciprocating jaw motion for efficient material compression
- Heavy-duty construction for large feed sizes
- Adjustable discharge settings for output control
- Wear-resistant components for long service life
- Optimized maintenance access points
