

Professional Broadcast Signal Distribution Equipment

Professional equipment designed for radio and TV broadcasting signal distribution and management. The modular design includes patch panels, distribution amplifiers, and signal processing units, suitable for high-density installations.

Product Overview

Professional Broadcast Signal Distribution System

This modular distribution equipment is engineered for professional radio and television broadcasting environments. It provides high-density signal management and processing capabilities, ensuring reliable performance in demanding, continuous-operation workflows. The system features a flexible, hot-swappable design that allows for seamless maintenance without service interruption.

System Capabilities

Core Components

- Patch panels
- Distribution amplifiers
- Signal processing units

Operational Features

Modular Design, Hot-swappable, High-density Installation, Continuous Operation

Technical Standards

Broadcast Application

Radio Broadcasting • TV Broadcasting
