

Professional Digital Video Broadcasting Television Component

This television component is designed for integration into audio-video systems. It supports digital video broadcasting standards and features a front panel with indicators, a display screen, and control buttons for navigation.

Overview

Professional DVB Integration Module

This professional-grade digital video broadcasting component is engineered for seamless integration into high-performance audio-video systems. It features a robust front panel interface for intuitive navigation, including status indicators for power, signal locking, and alarm conditions. Designed to meet industry-standard digital broadcasting requirements, this component ensures reliability and precise control for broadcast infrastructure applications.

Device Interface

Monitoring Indicators

- Power Indicator
- Video Status
- Alarm Status
- Lock Status

Front Panel Controls

Navigation Buttons, Configuration Controls, Status Display Screen

System Compatibility

Supported Standards

DVB • Digital Broadcasting

Model Identifier

GC 1890D
