

Professional Tire Changer with Tilt-Back Column

This tire changer is designed for professional automotive service environments, facilitating efficient and safe tire removal and installation. It features a pneumatic bead breaker, tilt-back column, and auxiliary arms for handling a wide range of tire sizes and types.

Product Overview

High-Efficiency Tire Service Solution

The X-290 is a professional-grade tire changer engineered for intensive automotive service environments. Featuring a robust tilt-back column and a four-claw universal clamping system, this unit provides precise control and safety during tire mounting and removal. Its ergonomic design and adjustable clamping force are specifically built to minimize operator fatigue while maintaining high throughput.

Technical Specifications

Motor & Speed

- Hydraulic motor with pressure adjustment
- Two rotating speeds
- Automatic high-speed mounting head rotation

Clamping Mechanism

Four-claw design, Universal adapter, Adjustable clamping force

Design & Ergonomics

Structural Components

- Tilt-back column design
- Removable controlling platform
- Removable working arm
- Removable bottom bracket
