

Programmable Digital Timer with Light Control

This programmable timer with light control allows for automated control of electrical devices. It features a digital display, multiple settings for customized schedules, and a manual override option.

Product Overview

Automated Power Management

This programmable digital timer provides precise control over electrical devices and lighting systems. Designed for residential or light commercial indoor use, the unit features a high-visibility digital display and multiple scheduling options to help optimize energy consumption. With convenient manual override capabilities and a simple three-prong plug-and-play installation, it offers an efficient solution for automating everyday electrical tasks.
