

Programmable Logic Controller

This programmable logic controller is a versatile and compact solution for industrial automation applications. It features a modular design that allows for customization and supports communication protocols such as Ethernet and Modbus.

Product Overview

Versatile Industrial Automation

The Programmable Logic Controller offers best-in-class performance in a compact, modular design. Available in brick or book formats, it provides tremendous versatility for machine control, process automation, and building automation systems. With simple navigation and intuitive programming software, it ensures an efficient engineering process without the need for extensive training.

Technical Specifications

I/O Options

- Digital I/O
- Analog I/O
- Expansion Module Support

Communication Protocols	Ethernet, Modbus, Serial
Model Identifier	TM221014T
Input Voltage	24 V

Features

Key Advantages

Compact Design • Easy Expansion • Intuitive Programming • Remote Visualization
