

Programmable Plug-in Timer Switch

This programmable plug-in timer switch automates electrical appliances by controlling their on/off cycles. It features a rotating dial for setting operating schedules and includes a manual override switch.

Product Overview

Smart Appliance Automation

The TH-167 programmable plug-in timer switch provides an efficient solution for automating electrical appliances in home and office environments. Featuring a user-friendly rotating dial for precise time interval settings, it allows users to effortlessly control on/off cycles for lighting, heating, and other devices. Its robust design includes a manual override switch, ensuring maximum flexibility and support for energy-saving initiatives.

Technical Specifications

Model Identifier	TH-167
Connector Type	European Standard Plug
Operation Mode	Mechanical Rotating Dial

Key Features

Typical Applications

- Lighting automation
- Heating control
- Household appliances
- Office equipment

Capabilities	Energy Saving, Automated Scheduling, Manual Override, Plug-and-Play
