

Programmable Plug-in Timer

This programmable plug-in timer automates the on/off cycles of electrical devices. It features a rotating dial with multiple pins for precise scheduling of appliances, lights, and other electronic equipment.

Overview

Automated Power Control

The TH-166 programmable plug-in timer is an efficient solution for managing the power cycles of various electronic devices. By utilizing a simple rotating dial mechanism, users can easily schedule when appliances or lighting should be powered on or off. This device is ideal for those looking to improve energy conservation and enhance home or office security through automated scheduling.

Technical Specifications

Model Number	TH-166
Key Features	Programmable, Plug-in Design, Rotating Dial, Energy Saving
Operation Mechanism	Mechanical rotating dial with pin-based scheduling
