

Programmable Timer Switch

The programmable timer switch is a device used to automatically control electrical circuits based on a pre-set schedule. It features a rotating dial with time markings, enabling users to set specific on and off times for connected appliances or systems.

Overview

Automated Energy Management

The TH-195 programmable timer switch is a versatile device designed to automate electrical circuit control with high precision. By utilizing an intuitive rotating dial system, users can easily schedule appliances or lighting systems to activate and deactivate at specific times. This solution is ideal for improving energy efficiency and operational convenience in residential and commercial environments.
