

PT1000 Temperature Sensor with Braided Leads

This high-precision PT1000 temperature sensor features a durable metal housing and flexible braided leads. It is designed for accurate temperature measurement in various applications and demanding environments.

Product Overview

High-Precision Thermal Sensing

This PT1000 temperature sensor is engineered for high-precision thermal measurement across demanding environments. Featuring a robust metal housing and durable braided leads, it offers exceptional reliability for industrial temperature control, HVAC systems, and scientific instrumentation. Its compact design ensures seamless integration into diverse electronic and mechanical systems.

Technical Details

Sensor Type	PT1000
Lead Design	Flexible braided leads

Compliance and Standards

International Certifications	TUV, UL, CCC, CE, CB, REACH, ROHS
------------------------------	-----------------------------------

Applications

Common Industry Applications

- Industrial temperature control
- HVAC systems
- Scientific instrumentation
- Household appliances
- Consumer electronics
- Automotive systems
