

Pulse Jet Dust Collector

This pulse jet bag filter is suitable for removing various fumes with high dedusting efficiency. Its compact structure allows for flexible layout and convenient installation.

Overview

Industrial Dust Collection Solution

The Pulse Jet Dust Collector is a high-efficiency filtration system designed for diverse industrial fume environments. Featuring a compact footprint and flexible layout, it allows for convenient installation and maintenance. The unit utilizes advanced low-pressure, long-bag technology that meets international performance standards to ensure superior air quality and operational reliability.

Key Features

Pulse Jet Filter Benefits

- High-efficiency dust removal
- Compact structure with small area requirement
- Flexible layout options
- Convenient filter bag replacement process
- Separate field structure for variable dust removal modes
- International-grade low pressure and long bag technology

Technical Specifications

Reverse Blowing Fabric Filter Features

- Down-in and up-out flow structure
- Low filtering wind speed for extended bag life
- Reverse blowing air direction matches dust dropping direction for higher efficiency

Compliance

Operating Standards

International Standard, High-Efficiency
