

PVC Insulated Copper Core Control Cable

This copper-cored control cable features PVC insulation and sheathing. The armored cable is designed for control and instrumentation applications requiring reliable signal transmission.

Product Overview

High-Performance Control Cable

This PVC insulated copper core control cable is engineered for reliable signal transmission in demanding industrial environments and machinery applications. It features high-quality copper conductors protected by durable PVC insulation and an outer sheath, ensuring long-term operational stability. The inclusion of color-coded cores facilitates efficient identification and termination, making it an ideal choice for complex instrumentation and control systems.

Construction Details

Core Identification

Color-coded

Conductor Material	Copper
Insulation Material	PVC
Outer Sheath	PVC

Features & Protection

Protection Features	Armored, PVC Insulated, Industrial Grade
---------------------	--

Applications

Primary Applications

- Control systems
- Instrumentation
- Industrial machinery
- Signal transmission
