

PVC Pipe Extrusion Line (50-160mm)

This PVC pipe extrusion line is mainly used in manufacturing pipes for plumbing and cable laying. The line is composed of a twin-screw extruder, mould, vacuum calibration tank, haul-off, cutter, and staker.

Product Overview

High-Efficiency PVC Pipe Production

This complete PVC pipe extrusion line is engineered for the high-quality, efficient manufacturing of pipes ranging from 50mm to 160mm in diameter. The integrated system features a high-performance extruder, precision calibration, rapid cooling, and consistent haul-off units to ensure uniform plasticizing and accurate dimensions. Designed for reliability, this line is suitable for producing pipes for water supply, drainage, and electrical conduit applications.

Technical Specifications

Pipe Diameter Range

50 mm

Min Diameter

160 mm

Max Diameter

Included Components

- High-performance extruder
- Calibration unit
- Cooling tank
- Haul-off unit
- Cutting machine
- Stacking system

Applications

Primary Applications

Water Supply, Drainage Systems, Electrical Conduit
