

R-134A Refrigerant

R-134A refrigerant is a hydrofluorocarbon (HFC) used in various cooling applications. It is a non-ozone depleting alternative to CFCs and HCFCs, designed for systems requiring R-134a.

Product Overview

High-Performance R-134a Refrigerant

This R-134a hydrofluorocarbon (HFC) refrigerant is engineered for optimal cooling performance in automotive air conditioning, refrigeration, and chiller systems. As a modern, non-ozone depleting alternative to legacy CFC and HCFC gases, it provides a reliable solution for maintenance and repair needs. The formulation is strictly managed to prevent moisture or impurity contamination, ensuring the long-term integrity of your cooling equipment.

Physical Properties

Net Weight

250 g

Net Content

Compliance and Safety

Environmental Profile	Non-ozone depleting, HFC, Environmentally responsible
Safety Notice	Strict adherence to safety guidelines and professional handling procedures is mandatory to maintain system integrity and prevent moisture contamination.

Applications

Typical Applications

- Automotive air conditioning
- Refrigeration systems
- Chillers
