

R4105P Diesel Engine for Industrial Applications

This four-cylinder diesel engine is designed for various industrial applications, including electric power generation. The water-cooled system ensures efficient thermal management and an extended operational lifespan.

Overview

Industrial Power Solution

The R4105P is a robust diesel engine specifically engineered for heavy-duty industrial applications and power generation. Featuring a reliable four-cylinder configuration and a water-cooled design, it ensures consistent thermal management during continuous operation. Built with high-durability components, this engine offers professional-grade reliability for the most demanding work environments.

Technical Specifications

Cylinders	4
Cooling System	Water-cooled
Fuel Injection	Mechanical

Build Quality

Design Features

- Heavy-duty cylinder block
- Forged crankshaft
- Precision-machined cylinder head

Applications

Primary Applications	Electric Power Generation, Industrial Machinery, Power Transmission
----------------------	---

Operational Status

Operational Performance

Continuous Duty • Reliable Load Handling • Thermal Managed
