

Radial Centrifugal Fan for HVAC

This radial centrifugal fan is designed for air conditioning and ventilation equipment. It features a cylindrical cage with multiple curved blades arranged around a central hub with perforations for weight reduction and airflow.

Product Overview

High-Performance Radial Centrifugal Fan

This radial centrifugal fan is engineered specifically for HVAC applications, including air conditioning and ventilation systems. Featuring a durable metal construction, the design incorporates a cylindrical cage with curved blades optimized for efficient airflow. The central hub includes weight-reduction perforations, ensuring balanced operation and longevity in demanding exhaust and ventilation environments.

Technical Specifications

Fan Type	Radial Centrifugal
Material	Metal
Applications	HVAC, Air Conditioning, Ventilation Systems, Exhaust Systems

Design Features

Design Highlights

- Cylindrical cage configuration
- Curved blade geometry for airflow efficiency
- Weight-reduced central hub
- Robust metallic construction
