

Radial Drilling Machine

The Radial Drilling Machine is a versatile metalworking machine designed for drilling holes in large or irregularly shaped workpieces. It features a radial arm that allows the drilling head to be positioned over a wide area, providing flexibility and precision.

Product Overview

Versatile Precision Drilling

The Radial Drilling Machine is engineered for professional metalworking, specifically designed to handle large or irregularly shaped workpieces with ease. Its hallmark radial arm allows for extensive positioning of the drilling head, ensuring maximum flexibility and accuracy across the work area. Equipped with a high-performance motor and a robust spindle, it delivers consistent power for demanding manufacturing, fabrication, and maintenance tasks.

Technical Details

Standard Equipment

- Radial arm for wide-area positioning
- High-torque motor
- Robust precision spindle
- Adjustable worktable
- Integrated drilling parameter controls
