

Radial Fan Impeller for HVAC Systems

This radial fan impeller is designed for HVAC and industrial applications. It features a multi-blade design for efficient air movement and is constructed from durable plastic material.

Product Overview

High-Efficiency Air Movement

This radial fan impeller is precision-engineered for demanding HVAC and industrial air handling applications. Featuring a robust multi-blade design, it ensures consistent and efficient airflow performance. The durable construction makes it an ideal component for integration into air conditioning units, ventilation systems, and specialized industrial equipment.

Technical Specifications

Design Features

- Radial impeller configuration
- Multi-blade design for optimized airflow
- Corrosion-resistant plastic construction

Material	Durable Plastic
Suitable Applications	HVAC Systems, Air Conditioning, Ventilation Systems, Industrial Air Handling
