

Radial Fan Impeller for Ventilation

Radial fan impeller designed for air conditioning and ventilation equipment. Features a robust construction with multiple curved blades arranged around a central hub.

Product Overview

High-Performance Radial Fan Impeller

This radial fan impeller is precision-engineered for integration into air conditioning and ventilation systems. Its robust construction features multiple curved blades designed to optimize airflow efficiency and structural integrity. The central hub includes mounting points for easy installation and precise balancing, making it an ideal component for electric fans and exhaust systems.

Technical Specifications

Design Features

- Robust curved blade construction
- Central mounting hub
- Perforated hub for balancing
- Reinforced outer ring

Blade Configuration	Curved blade design for optimized airflow
Suitable Applications	Air Conditioning, Ventilation Systems, Electric Fans, Exhaust Systems
