

Radiant Electric Space Heater with Carbon Fiber Element

This radiant heater uses a carbon fiber heating element. It features adjustable power settings of 500W and 1000W, along with a tilting angle, oscillation, and tip-over protection.

Product Overview

Efficient Radiant Heating Solution

This radiant electric space heater utilizes advanced carbon fiber heating elements to deliver immediate, localized warmth. Designed with a distinct circular aesthetic, it combines a protective grille with intuitive manual control knobs for easy operation. Ideal for indoor environments, this unit offers a reliable and efficient way to maintain comfort in specific areas.
