

Radio Communication Antenna Set

This set includes various radio communication antennas, likely designed for handheld transceivers. The antennas come in different lengths, thicknesses, and construction types and improve signal strength and range for radio communication devices.

Overview

Professional Antenna Solutions

This versatile radio communication antenna set provides a comprehensive range of options for handheld transceivers and similar communication devices. Featuring multiple lengths and construction types, these antennas are engineered to optimize signal strength and extend transmission range in various operational environments. With standard BNC-style connectors, they ensure quick and reliable attachment for field professionals requiring flexible communication setups.

Technical Details

Included Models

- JBA-813
- JBA-814
- JBA-815
- JBA-816
- JBA-817
- JBA-818
- JBA-819

Connector Type

BNC

Primary Application

Handheld Transceivers, Signal Enhancement, Radio Communication
