

Rail Mounted Gantry Crane for Container Handling

Rail mounted gantry cranes are specialized for handling containers in intermodal yards and port facilities. These cranes travel on rails to efficiently load, unload, and stack shipping containers.

Product Overview

High-Efficiency Container Handling

The Rail Mounted Gantry (RMG) crane is a robust solution engineered for loading, unloading, and stacking containers in large-scale intermodal and port facilities. Featuring optimized automated design, these cranes significantly improve operational throughput while reducing power consumption and human error. Their high lifting capacity and precise control systems ensure reliable, low-noise performance in demanding logistical environments.
