

Rail Tank Car for Liquid Transport

This rail tank car is designed for transporting liquids. The cylindrical tank is mounted on a railway carriage and includes safety railings and access points.

Overview

Professional Liquid Rail Logistics

This specialized rail tank car is engineered for the safe and efficient bulk transport of liquid goods via rail networks. The robust cylindrical vessel design ensures structural integrity during transit, while the integrated top-access railings provide essential safety for maintenance and loading procedures. Built for demanding logistical operations, it offers a reliable solution for industrial liquid transportation requirements.

Technical Specifications

Tank Design	Cylindrical
Unit Identification	76307770

Safety & Features

Safety Equipment	Safety Railings, Top Access Points, Bulk Transport Optimized
