

Railway Passenger Car Air Conditioner

This air conditioner is designed for use in railway passenger cars. It provides climate control to maintain a comfortable environment for passengers.

Overview

High-Performance Railway Climate Control

This air conditioning system is specifically designed for integration into railway passenger cars, ensuring optimal passenger comfort during transit. Engineered for durability and efficiency, it supports high-speed operations of up to 160km/h. The system is built to withstand the rigorous demands of international rail transport environments.

Performance

Maximum Operating Speed

160 km/h

Rated Speed

Technical Details

Vehicle Compatibility	Railway Passenger Car (RW Series)
Model Identification	RW 53242

Design & Construction

Exterior Configuration

- Integrated window ventilation support
- Heavy-duty undercarriage suspension compatibility
- Standard passenger car door alignment

Visual Markings	Speed Rated, RW Series, Standard Gauge Compatible
