

Range Hood Electronic Control Circuit Boards

These electronic boards are designed for installation in range hoods. The boards provide control of fan speed and lighting.

Product Overview

Professional Range Hood Control System

This high-quality electronic control system is engineered specifically for modern range hood appliances. The solution consists of a primary control unit for power distribution and an intuitive user interface board for seamless operation of fan speeds and lighting. These green, professionally assembled circuit boards utilize both surface-mount and through-hole technology to ensure long-term reliability and precise appliance control.

Technical Specifications

Integrated Functions

- Fan Speed Control
- Lighting Activation
- Audible Feedback (Buzzer)
- Appliance Power Distribution

Construction

SMT Assembly • Through-hole Components

Component Configuration

Main Control Board, UI Interface Board
