

Rearview Mirror Defroster Membrane Heater

This membrane heater is designed as an auto part for rearview mirrors. It features a thin, flexible construction with an integrated heating element for defrosting and demisting.

Product Overview

High-Performance Defrosting Solution

This metal-foil heating pad is engineered specifically for automotive rearview mirrors, providing reliable defrosting and demisting capabilities. Designed for uniform heat distribution, it ensures clear visibility in cold weather conditions to enhance driving safety. The flexible construction and various terminal options allow for seamless integration into vehicle electrical systems.

Technical Specifications

Manufacturing Experience
