

# Reciprocating Air Compressor Pump

This reciprocating air compressor pump features two cylinders, each equipped with cooling fins. It is designed for applications requiring compressed air, such as powering spraying equipment and pneumatic tools.

## Product Overview

### Industrial Air Compression Solution

This robust reciprocating air compressor pump is engineered for high-performance pneumatic applications, featuring a reliable two-cylinder configuration. The cast metal construction ensures long-term durability, while integrated cooling fins effectively manage heat during operation. Designed for versatility, this pump is an ideal component for professional spraying equipment and demanding pneumatic tool systems.

## Technical Design

Cylinder Configuration	2
Build Material	Cast Metal
Thermal Management	Integrated cooling fins

## Features

Suitable Applications	Spraying Machinery, Pneumatic Tools, Industrial Air Compression
