Product Overview

High-Efficiency Rectangular Baler

This rectangular crop baler is designed to streamline agricultural harvesting by integrating pickup, feeding, compaction, and baling into a single efficient process. It is compatible with various tractors via standardized mounting, ensuring ease of use in diverse field conditions. Featuring high-performance knotting technology, this machine produces dense and uniform rectangular bales ideal for storage and transportation.

Technical Specifications

Bale Type

Rectangular

Model Identification

9YFQ-1960

System Components

Integrated Systems

- Pickup system
- Feeding system
- Compression system
- Baling system
- Density control system

Knotter Technology

German-engineered

Applications

Suitable Crops

Nature Grass, Planting Hay, Wheat Straw, Rice Straw
