

Red Sand-Cast Metal Component

This red-colored component is manufactured via sand casting. It features multiple cylindrical protrusions, mounting points, and a flat base for mechanical system integration.

Product Overview

Red Sand-Cast Metal Component

This high-quality sand-cast metal component is engineered for durability and precise mechanical integration. Featuring a robust, angular design with multiple mounting points, it is optimized for stability and reliability in demanding mechanical systems. The distinct red finish and textured surface profile are characteristic of the sand-casting process, ensuring excellent structural integrity for industrial applications.

Technical Details

Finish

Red Coating • Textured Surface

Manufacturing Process

Sand Casting

Part Identifier

P R01 2

Design Features

Angular Geometry, Cylindrical Protrusions, Flat Base, Integrated Mounting Points
