

Red Wine Bottle Mold

Precision-engineered mold designed for the production of red wine bottles. Constructed from high-grade steel, the mold ensures durability during high-volume manufacturing.

Product Overview

Precision Engineering for Glass Manufacturing

This high-grade steel mold is specifically engineered for the efficient production of red wine bottles. Featuring a robust two-part construction, it ensures consistent shape replication and easy bottle removal during high-volume manufacturing. The internal cavity and optimized surface finish are meticulously crafted to deliver flawless glass formation, while integrated venting channels facilitate efficient air displacement.

Technical Specifications

Construction	Two-part mold
Material	High-grade steel
Surface Finish	Optimized for smooth glass release
Venting Mechanism	Yes

Manufacturing Features

Key Features	High-Volume Compatible, Precision Engineered, Wear Resistant, Consistent Replication
