

Refrigerator Compressor Motor

This motor is designed for use in refrigerator compressors. The assembly includes a laminated stator core with copper windings and a cylindrical rotor with a finned end.

Product Overview

High-Performance Compressor Motor

This refrigerator compressor motor is engineered for robust performance in demanding cooling environments. It supports a wide range of refrigerating capacities from 950W to 4800W, making it suitable for various commercial refrigeration applications. Designed to handle both Low and High Back Pressure (L/HBP) requirements, it offers reliable operation with R404a refrigerant.

Technical Specifications

Refrigerating Capacity

950 W

Min Capacity

4800 W

Max Capacity

Refrigerant Compatibility

R404a

COP Range

1.1 - 2.1

Pressure Application

LBP, HBP
