

# Refrigerator Freezer Motor

This refrigerator freezer motor is designed for use in refrigerators and freezers. It is a crucial component for maintaining the cooling function in refrigeration appliances.

## Product Overview

### High-Efficiency Freezer Motor

The MRWF-05 refrigerator freezer motor is a high-precision component engineered for reliable cooling performance in refrigeration appliances. Designed with a compact cylindrical body and robust mounting flange, it ensures stable operation and ease of installation. This motor delivers consistent power and speed, making it an essential replacement or OEM part for maintaining optimal appliance cooling cycles.

## Technical Specifications

Model Number	MRWF-05
Voltage	12 V
Power Consumption	3.1 W
Rated Speed	2615 RPM
Identification Codes	11221316006, A6281236
Batch Reference	CR 160728
