

Refrigerator Motor

High-efficiency motor designed for refrigerators and refrigeration equipment, ensuring reliable and consistent performance. This motor is engineered for optimal energy consumption and durability, making it an ideal component for various refrigerator models.

Product Overview

High-Efficiency Refrigeration Motor

This high-efficiency motor is specifically engineered for refrigerators and refrigeration equipment, ensuring reliable and consistent performance. Designed for optimal energy consumption and durability, it serves as an ideal component for various refrigerator models. The robust construction and precise design contribute to quiet operation and an extended lifespan, significantly enhancing the overall efficiency and longevity of refrigeration systems.

Technical Capabilities

Service Scope

- Customized product design
- Technical solutions
- Product performance testing
- CKD parts supply
- Motor technical services

Suitable Applications

Refrigerators, Air Conditioners, Washing Machines

Quality Assurance

Laboratory Testing Capabilities

Performance Testing • Safety Assessment • Noise Analysis • Dynamometer Testing • Material Performance • Motor Simulation • Life Testing • Damp Heat Testing
