Product Overview

Smart Passive Lock System

This advanced smart passive lock combines the familiar appearance of a mechanical lock with an embedded high-security smart cylinder. It offers sophisticated information management features, enabling scheduling, real-time tracking, and comprehensive audit logs. Designed for both durability and security, this system provides a tamper-resistant, maintenance-free solution for professional access control.

Technical Specifications

IP Rating

IP67 Water Resistance

Material

Stainless Steel

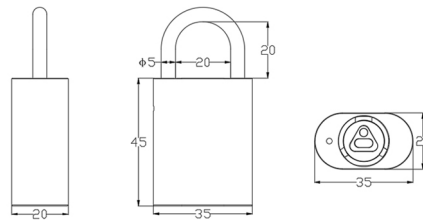

Communication

Wireless with AES128 encryption

Maintenance

No wiring required, Maintenance-free

Dimensions

WM-2000C-L35

Model Dimensions

Model	Body (mm)	Shackle Diameter (mm)
WM-2000C-L35	35 x 45 x 20	5
WM-2000C-L40	40 x 46 x 20	6.5

Key Features

Security Capabilities

- Unable to technical opening
- Authorized unlocking management
- One key unlocks multiple locks
- Responsibility tracing
- Hierarchical access management

Application Scenarios

Applications Scenarios

Be widely used in logistics supervision, customs smart card, airport logistics coordination management, railway container management supervision application, vehicle management, bulk cargo terminal

Warehouse

Office

Emergency Exit

Factory

Transport Vehicles

Industry Applications

- Logistics & Customs
- Airport & Railway Infrastructure
- Power & Communication Cabinets
- Warehousing & Factories
- Emergency Exits & Bulk Cargo Terminals
